The revolution will be won in a single day

BUT WHO WILL SAVE THE JEWS ONCE THE WORLD LEARNS WHAT THEY'VE DONE?

The final revolution for human freedom will be won in a single day, not by bombs, famine, mass poisonings, or electronic vaporization, but by a few well chosen phrases uttered in exactly the right time and place, which will turn on a light that will illuminate the darkness of a beast that has afflicted us for more centuries than we can sensibly count.

It WILL occur in a single day, because the serpentine network of the beast engulfs the entire planet with its self-destructive blackmail avarice, and everyone everywhere will simultaneously realize that it is not the philosophy of profit that has turned our planet into a diseased cinder, but rather the policies of a certain collection of megalomaniacal fools who control every last dollar in the world, or damn near. It is they who are directly responsible for all this senseless mayhem and needless destruction, and it is us sheeple who are secondarily responsible for tolerating their evil mind control methods all these years.

We proles are only numbers in the ledger book of some rich Jewish crook tied into a worldwide network of shysters who strive to make us all half-dead zombies bound up in complex payment plans with no say in our fate.

All it will take to free us from this bizarre bonded indebtedness is to understand what Jews have done to the world over time, and how they are currently well advanced in their objective to either kill or enslave all the non-Jews of the world, thus fulfilling the commands of their secretive "holy book," the Talmud — which is a psychological atrocity that has resulted in THEIR control over ALL the systems that control US.

Not to realize this is to guarantee your future as a mind-controlled slave, and quite likely, your impending and unnatural death.

What Jews have done to the world . . . what exactly have they done?

1. Social engineering of reality through editing of history.

From earliest times, the core criminals who later became known as Jews had the natural advantage of being itinerant merchants (caravansers), and their knowledge of multiple cultures imbued in them an experiential advantage over sedentary populations confined to one small town or country, who were, you might say, sitting ducks.

I'm genuinely sorry to tell many of you that the template for deception that has been followed all these years was the creation of Christianity in 325 AD, which taught everybody to turn the other cheek when the Hidden Hand reached into their pockets. It taught people to conceptualize their safety based upon a promise that could never be redeemed except in the manipulated imagination of the believer.

Belief in something that could not possibly be true is the same mental mechanism needed to believe that our current system of banking is an honest business.

The similarity of proposition, authority and trappings leads us to believe that somehow religion and banking are cut from the same cloth. The logic it takes to believe in some great god guiding all from above is the identical leap of faith it takes to borrow money at compound interest. Trust us on this one, they say. And because of the way we are built — fearful and finite organisms — we do.

The great sci-fi visionary H.G. Wells authored the thought that mankind's mental and moral progress stopped in the 1770s. The name most associated with this sudden surcease in evolution would be Rothschild.

Control of money led to control of everything else, and the bastardization of every discipline known to man for the benefit of the host parasitic group, Mongol invaders known as Ashkenazi who deliberately chose to ally themselves with the worst of all possible brigands, the Sephardics, who together, shrewdly and patiently, plundered all the sitting ducks in the world.

Control of the media made possible all their scams. It is Rule 1. David Rockefeller famously said it best:

"We are grateful to the Washington Post, the New York Times, Time Magazine and other great publications whose directors have attended our meetings and respected their promises of discretion for almost forty years. It would have been impossible for us to develop our plan for the world if we had been subjected to the light of publicity during those years. But now the world is more sophisticated and prepared to march towards a world government. The supra-national sovereignty of an intellectual elite and world bankers is surely preferable to the national auto-determination practiced in past centuries."

Having the most money gave them the upper hand in business, and they in perpetuity captured all the valuable industries in the world: Rockefeller's oil, Morgan's railroads, Marx's politics, Sassoon's drugs to China, Monsanto's slaves, Lehman's carpetbagging, Freud's psychology, Meyer's Hollywood, Einstein's physics, Irving Berlin's music monopoly, Warburg's Federal Reserve scam, Oppenheimer's Jewish hell bomb, Betty Friedan's housewives, Abbie Hoffman's hippies, Bronfman's booze, Henry Kissinger's assassinations, Norman Lear's sitcoms, Bill Gates's computers . . . and so on.

Perhaps the Jews' most heinous crimes are in the area of medicine. One cannot but remember that old Ottoman Empire proscription against Jews practicing medicine because it says in the Talmud that Jews should become doctors to enable them to kill goyim in a wider variety of ways. Can you say cancer treatment? Mercury fillings? Fluoride? Thimerosal? Squalene?

Depleted uranium? Lead poisoning did Rome in. Chicago babies, too. The mad cow is due to come home soon.

John D. Rockefeller first sold oil as a medicinal elixir before he found out it could really burn. Jonas Salk was given a Nobel Prize for a vaccine that gave everyone polio, a fake disease that was really industrial lead poisoning which bought-off medical scientists concealed with fancy rhetoric.

Then there are more recent elixirs: Gardasil, which has already destroyed future generations of Americans; Prozac, the fast track to zombieland; Morgellon's disease, they say, comes from the chemtrails and puts little wriggly nanobots twitching through your deteriorating veins. Count on these all being Jewish inventions. If conventionally trained, count on your doctor prescribing things that will kill you.

2. The Jews' harvest

Have you lost a loved one in a war? Cindy Sheehan did, and after years of crying in public, she choked on the American flag. The newspapers regarded her as an abnormal crank — imagine that, a mother whose son was murdered for no honest reason, being called abnormal, when all she was trying to do was to point out the lie each and every one of us reading this has let rip the soul right out of all our hearts, as we cringe with uncertain confusion in this ugly soup of manufactured realities.

The famous Berlin professor Werner Zombart uttered the immortal truism: "Wars are the Jews' harvest."

Most notable in our worldwide indictment of Jewish crimes against humanity are the needless deaths caused by covert usurpation of, at this point, virtually every government in the world. The best place to see this in all its historical vividity is in Capt. Ramsay's "The Nameless War," on my website and also for years, I have recently learned, on the quality websites of Daryl Bradford Smith <<http://www.iamthewitness.com>> and Jackie Patru <<http://www.sweetliberty.org>>.

In Ramsay you see in one glance the Jewish penetration of England (Cromwell), France (Rothschild's renegade puppet Napoleon), Russia (New York Jews who changed their names and became the Politburo), Germany (Nuremberg verdicts were a hoax, just like the lynching of Saddam Hussein), and lastly, and most thoroughly, the United States (Roosevelt and his right hand man Nelson Rockefeller).

Talking about wars, we're talking about the Federal Reserve, the very shadow government that has bilked us out of our hard earned money for more than a century while protected by the well-coached puppets who pose as presidents whom the bankers themselves have chosen to lead us. And how have they accomplished this?

By taking subversive control of all our media — from schools to movies to TV to computer options — every possible avenue of human endeavor is saturated by this pornographizing influence that is decidedly Jewish. The distinguishing feature of all successful Hollywood actors is that the finest non-Jewish actors must be utterly debased in a depraved way before they get their Oscars.

As Bugsy Siegel's Las Vegas Jewish architecture became the norm for development in the United States in the 1940s, so nihilistic dissatisfaction became the fashionable ethic toward the 1960s, and revolutionary activities sprung from U.S. college campuses, fueled by an array of CIA distributed drugs.

The Jewish destabilization template so successful in England, France, Russia, Germany and most of the other countries in the world has, at this point, AD 2009, just about rattled the entire world into crumbling pieces by making money the centerpiece of everyone's focus, causing all other areas of human thought to become polluted and diminished by greed.

The poet Robert Lowell once wrote that nothing good could ever be written if it was written for money. And yet today, practically everything is written for that very purpose, which is an instructive insight into the reason for the consistently poor quality of contemporary communication.

The important thing to know is the death toll caused by the Bolshevik Revolution, which in Stalin's later days was controlled by Nelson Rockefeller, who was also Franklin Roosevelt's top adviser. Sixty-six million non-Jews were killed by a Soviet state funded by New York Jewish bankers. That is important American history for you.

Jewish TV took apart Sen. Joseph McCarthy when the Wisconsin senator, fueled by Eustace Mullins' research which had been commissioned by the imprisoned poet Ezra Pound, named Communists bent on subverting the Constitution.

Both Mullins and Pound, however, failed to fully perceive the power of the Jewish moneymedia monster. Though Pound was imprisoned for 13 years and Mullins' books were burned in Germany, the great mistake everyone made was not realizing that the word Communist was an exact synonym for Jewish. And while we were involved in all these Whitewater-type brouhahas, they created the state of Israel.

But we didn't hear it. We couldn't. The white noise media blare was simply too powerful. Destabilization trends proffered by Kerouac and the pervert poet Ginsberg lured adolescents into Jewish-manipulated nihilism. The highest image it seems the Jews want to cultivate is to call pissing on a crucifix an art form. That seems to be the bellwether image they wish to imbue on the mind of the goy.

Frankly, I consider that repugnant act as the highest expression of their so-called religion, Judaism, and I sorely wish the world would wake up and see what it really means. It really means that they're pissing on themselves, and don't realize it.

But they're definitely pissing on us, and we must stop them — now!

3. Provable pathology

Every crime is committed by someone who did not receive love at the proper time and place.

We all need to stop being whores and zealots for one philosophy or another and realize we are all in this together, except for that one group of congenital onanists who urinate on crucifixes.

That's like pissing on hope. It's a form of nihilism guaranteed to destroy the practitioner of it, and all around him. This is precisely what is infecting our world.

The core philosophy espousing this is the Talmud (and also by extension, The Old Testament). What ill-begotten god could have uttered that it was OK to kill others, rape their women, and take their property because they were acting in his holy name. What kind of twisted adolescent sociopathic bullshit is that?

The words of a psychopath, is what. The god of the Old Testament, for now and forevermore, is mentally ill, and the Talmud is the diabolically perfect illustration of how that perverted pathology will destroy us, if we let it.

It's not OK to say you're better than everyone else because your G-d says so. That is known as deviant behavior, as defined by Jewish psychiatric authorities. It is a superiority complex, born out of fear and lack of love.

The basic mistake of monotheistic religions is that you can't get love by force, and that's what they've done, by coercion and social engineering. The Jews just twisted it to inculcate into the minds of the feckless bovines that the actual Messiah was Israel, the Jewish people, the outlaw caravansers, the bandits from across the river.

Jews worship thieves. And this is what we have let our world become.

Are you a thief? Do you go along to get along?

Do you temper your remarks with politically correct (but tantalizing) rhetoric to let your listener know what you mean, but not the whole world around you? On TV, they say that's what freedom is. Do you believe them?

The revolution will be won in a single day because the world will finally wake up and see that doing the right thing is far more important to our survival than doing the profitable thing.

Any religion that can't admit it has profaned the true nature of God over time is not worthy of being called His emissary, for in our imperfect natures, misunderstanding the grander design is inevitable until we finally understand, stop worrying, and get on with the work of life.

One thing's for certain: when everybody finds out what the Jews have done to the world, the world will treat the Jews far more

kindly than the Jews have treated the world, and in this way, with severe protections, they will lovingly be allowed to rejoin the human race and share in its glorious future.

It's always wrong to shatter the beliefs of people who believe the best thing in life is love. Let them alone; they've worked it out; they'll be OK.

The reason the guy wrote "Thou Shalt Not Steal" is because what really matters in this life is how much your neighbor likes and respects you. Without him, you're nothing.

This is how the revolution will be won in a single day. For many of you, that day is today, and one day soon, everyone will realize it, all at once.

John Kaminski is a writer of lives on the Gulf Coast of Florida, who once wrote, "Never fear what you may not avoid." <http://johnkaminski.info/> Please support independent, unbought journalists: 250 N. McCall Rd. #2, Englewood FL 34223

Pediatrician's wife, American Academy of Pediatrics Annual Conference Hyatt-Regency Hotel, Chicago, April 14, 1996 Said:

"Millions of Jews were murdered during the Holocaust because circumcision marked them as Jews! This must never happen again! Everyone should be circumcised!"

Where Is My Foreskin? The Case Against Circumcision

Paul M. Fleiss, MD

Excerpt:

* **Protection:** Just as the eyelids protect the eyes, the foreskin protects the glans and keeps its surface soft, moist, and sensitive. It also maintains optimal warmth, pH balance, and cleanliness. The glans itself contains no sebaceous glands--glands that produce the sebum, or oil, that moisturizes our skin. [11] The foreskin produces the sebum that maintains proper health of the surface of the glans.

START:

Western countries have no tradition of circumcision. In antiquity, the expansion of the Greek and Roman Empires brought Westerners into contact with the peoples of the Middle East, some of whom marked their children with circumcision and other sexual mutilations. To protect these children, the Greeks and Romans passed laws forbidding circumcision.[1] Over the centuries, the Catholic Church has passed many similar laws.[2,3] The traditional Western response to circumcision has been revulsion and indignation.

Circumcision started in America during the masturbation hysteria of the Victorian Era, when a few American doctors circumcised boys to punish them for masturbating. Victorian doctors knew very well that circumcision denudes, desensitizes, and disables the penis. Nevertheless, they were soon claiming that circumcision cured epilepsy, convulsions, paralysis, elephantiasis, tuberculosis, eczema, bed-wetting, hip-joint disease, fecal incontinence, rectal prolapse, wet dreams, hernia, headaches, nervousness, hysteria, poor eyesight, idiocy, mental retardation, and insanity.[4]

In fact, no procedure in the history of medicine has been claimed to cure and prevent more diseases than circumcision. As late as the 1970s, leading American medical textbooks still advocated routine circumcision as a way to prevent masturbation.[5] The antisexual motivations behind an operation that entails cutting off part of the penis are obvious.

The radical practice of routinely circumcising babies did not begin until the Cold War era. This institutionalization of what amounted to compulsory circumcision was part of the same movement that pathologized and medicalized birth and actively discouraged breastfeeding. Private-sector, corporate-run hospitals institutionalized routine circumcision without ever consulting the American people. There was no public debate or referendum. It was only in the 1970s that a series of lawsuits forced hospitals to obtain parental consent to perform this contraindicated but highly profitable surgery. Circumcisers

responded by inventing new "medical" reasons for circumcision in an attempt to scare parents into consenting.

Today the reasons given for circumcision have been updated to play on contemporary fears and anxieties; but one day they, too, will be considered irrational. Now that such current excuses as the claim that this procedure prevents cancer and sexually transmitted diseases have been thoroughly discredited, circumcisers will undoubtedly invent new ones. But if circumcisers were really motivated by purely medical considerations, the procedure would have died out long ago, along with leeching, skull-drilling, and castration. The fact that it has not suggests that the compulsion to circumcise came first, the "reasons," later.

Millions of years of evolution have fashioned the human body into a model of refinement, elegance, and efficiency, with every part having a function and purpose. Evolution has determined that mammals' genitals should be sheathed in a protective, responsive, multipurpose foreskin. Every normal human being is born with a foreskin. In females, it protects the glans of the clitoris; in males, it protects the glans of the penis. Thus, the foreskin is an essential part of human sexual anatomy.

Parents should enjoy the arrival of a new child with as few worries as possible. The birth of a son in the US, however, is often fraught with anxiety and confusion. Most parents are pressured to hand their baby sons over to a stranger, who, behind closed doors, straps babies down and cuts their foreskins off. The billion-dollar-a-year circumcision industry has bombarded Americans with confusing rhetoric and calculated scare tactics.

Information about the foreskin itself is almost always missing from discussions about circumcision. The mass circumcision campaigns of the past few decades have resulted in pandemic ignorance about this remarkable structure and its versatile role in human sexuality. Ignorance and false information about the foreskin are the rule in American medical literature, education, and practice. Most American medical textbooks depict the human penis, without explanation, as circumcised, as if it were so by nature.

What Is the Foreskin?

The foreskin is a uniquely specialized, sensitive, functional organ of touch. No other part of the body serves the same purpose. As a modified extension of the penile shaft skin, the foreskin covers and usually extends beyond the glans before folding under itself and finding its circumferential point of attachment just behind the corona (the rim of the glans). The foreskin is, therefore, a double-layered organ. Its true length is twice the length of its external fold, comprising 80 percent or more of the penile skin covering, [6] or at least 25 percent of the flaccid penis's length.

The foreskin contains a rich concentration of blood vessels and nerve endings. It is lined with the peripenic muscle sheet, a smooth muscle layer with longitudinal fibers. These muscle fibers are whorled, forming a kind of sphincter that ensures optimum protection of the urinary tract from contaminants of all kinds.

Like the under surface of the eyelids or the inside of the cheek, the under surface of the foreskin consists of mucous membrane. It is divided into two distinct zones: the soft mucosa and the ridge mucosa. The soft mucosa lies against the glans penis and contains sebaceous glands that secrete emollients, lubricants, and protective antibodies. Similar glands are found in the eyelids and mouth.

Adjacent to the soft mucosa and just behind the lips of the foreskin is the ridged mucosa. This exquisitely sensitive structure consists of tightly pleated concentric bands, like the elastic band at the top of a sock. These expandable pleats allow the foreskin lips to open and roll back, exposing the glans. The ridged mucosa gives the foreskin its characteristic taper.

On the underside of the glans, the foreskin's point of attachment is advanced toward the meatus (urethral opening) and forms a band-like ligament called the frenulum. It is identical to the frenulum that secures the tongue to the floor of the mouth. The foreskin's frenulum holds it in place over the glans, and, in conjunction with the smooth muscle fibers, helps return the retracted foreskin to its usual forward position over the glans.

Retraction of the Foreskin

At birth, the foreskin is usually attached to the glans, very much as a fingernail is attached to a finger. By puberty, the penis will usually have completed its development, and the foreskin will have separated from the glans. [8] This separation occurs in its own time; there is no set age by which the foreskin and glans must be separated. One wise doctor described the process thus, "The foreskin therefore can be likened to a rosebud which remains closed and muzzled. Like a rosebud, it will only blossom when the time is right. No one opens a rosebud to make it blossom." [9]

Even if the glans and foreskin separate naturally in infancy, the foreskin lips can normally dilate only enough to allow the passage of urine. This ideal feature protects the glans from premature exposure to the external environment.

The penis develops naturally throughout childhood. Eventually, the child will, on his own, make the wondrous discovery that his foreskin will retract. There is no reason for parents, physicians, or other caregivers to manipulate a child's penis. The only person to retract a child's foreskin should be the child himself, when he has discovered that his foreskin is ready to retract.

Parents should be wary of anyone who tries to retract their child's foreskin, and especially wary of anyone who wants to cut it off. Human foreskins are in great demand for any number of commercial enterprises, and the marketing of purloined baby foreskins is a multi-million-dollar-a-year industry. Pharmaceutical and cosmetic companies use human foreskins as research material. Corporations such as Advanced Tissue Sciences, Organo genesis, and BioSurface Technology use human foreskins as the raw materials for a type of breathable bandage.

What Are the Foreskin's Functions?

The foreskin has numerous protective, sensory, and sexual functions.

*** Protection:** Just as the eyelids protect the eyes, the foreskin protects the glans and keeps its surface soft, moist, and sensitive. It also maintains optimal warmth, pH balance, and cleanliness. The glans itself contains no sebaceous glands--

glands that produce the sebum, or oil, that moisturizes our skin. [11] The foreskin produces the sebum that maintains proper health of the surface of the glans.

*** Immunological Defense:** The mucous membranes that line all body orifices are the body's first line of immunological defense. Glands in the foreskin produce antibacterial and antiviral proteins such as lysozyme. [12] Lysozyme is also found in tears and mother's milk. Specialized epithelial Langerhans cells, an immune system component, abound in the foreskin's outer surface. Plasma cells in the foreskin's mucosal lining secrete immunoglobulins, antibodies that defend against infections.

*** Erogenous Sensitivity:** The foreskin is as sensitive as the fingertips or the lips of the mouth. It contains a richer variety and greater concentration of specialized nerve receptors than any other part of the penis. [15] These specialized nerve endings can discern motion, subtle changes in temperature, and fine gradations of texture. [16, 17, 18, 19, 20, 21, 22, 23]

*** Coverage during Erection:** As it becomes erect, the penile shaft becomes thicker and longer. The double-layered foreskin provides the skin necessary to accommodate the expanded organ and to allow the penile skin to glide freely, smoothly, and pleasurably over the shaft and glans.

*** Self-Stimulating Sexual Functions:** The foreskin's double-layered sheath enables the penile shaft skin to glide back and forth over the penile shaft. The foreskin can normally be slipped all the way, or almost all the way, back to the base of the penis, and also slipped forward beyond the glans. This wide range of motion is the mechanism by which the penis and the orgasmic triggers in the foreskin, frenulum, and glans are stimulated.

*** Sexual Functions in Intercourse:** One of the foreskin's functions is to facilitate smooth, gentle movement between the mucosal surfaces of the two partners during intercourse. The foreskin enables the penis to slip in and out of the vagina non-abrasively inside its own slick sheath of self-lubricating, movable skin. The female is thus stimulated by moving pressure rather than by friction only, as when the male's foreskin is missing.

The foreskin fosters intimacy between the two partners by enveloping the glans and maintaining it as an internal organ. The sexual experience is enhanced when the foreskin slips back to allow the male's internal organ, the glans, to meet the female's internal organ, the cervix--a moment of supreme intimacy and beauty.

The foreskin may have functions not yet recognized or understood. Scientists in Europe recently detected estrogen receptors in its basal epidermal cells. [24] Researchers at the University of Manchester found that the human foreskin has apocrine glands. [25] These specialized glands produce pheromones, nature's chemical messengers. Further studies are needed to fully understand these features of the foreskin and the role they play.

Care of the Foreskin

The natural penis requires no special care. A child's foreskin, like his eyelids, is self-cleansing. For the same reason it is inadvisable to lift the eyelids and wash the eyeballs, it is inadvisable to retract a child's foreskin and wash the glans. Immersion in plain water during the bath is all that is needed to keep the intact penis clean. [26]

The white emollient under the child's foreskin is called smegma. Smegma is probably the most misunderstood, most unjustifiably maligned substance in nature. Smegma is clean, not dirty, and is beneficial and necessary. It moisturizes the glans and keeps it smooth, soft, and supple. Its antibacterial and antiviral properties keep the penis clean and healthy. All mammals produce smegma. Thomas J. Ritter, MD, underscored its importance when he commented, "The animal kingdom would probably cease to exist without smegma." [27]

Studies suggest that it is best not to use soap on the glans or foreskin's inner fold. [23] Forcibly retracting and washing a baby's foreskin destroys the beneficial bacterial flora that protect the penis from harmful germs and can lead to irritation and infection. The best way to care for a child's intact penis is to leave it alone. After puberty, males can gently rinse their glans and foreskin with warm water, according to their own self-determined needs.

How Common Is Circumcision?

Circumcision is almost unheard of in Europe, South America, and non-Muslim Asia. In fact, only 10 to 15 percent of men throughout the world are circumcised. The vast majority of whom are Muslim.[29]The neonatal circumcision rate in the western US has now fallen to 34.2 percent.[30] This relatively diminished rate may surprise American men born during the era when nearly 90 percent of baby boys were circumcised automatically, with or without their parents' consent.

How Does Circumcision Harm?

The "medical" debate about the "potential health benefits" of circumcision rarely addresses its real effects.

* **Circumcision denudes:** Depending on the amount of skin cut off, circumcision robs a male of as much as 80 percent or more of his penile skin. Depending on the foreskin's length, cutting it off makes the penis as much as 25 percent or more shorter. Careful anatomical investigations have shown that circumcision cuts off more than 3 feet of veins, arteries, and capillaries, 240 feet of nerves, and more than 20,000 nerve endings.[31]The foreskin's muscles, glands, mucous membrane, and epithelial tissue are destroyed, as well.

* **Circumcision desensitizes:** Circumcision desensitizes the penis radically. Foreskin amputation means severing the rich nerve network and all the nerve receptors in the foreskin itself. Circumcision almost always damages or destroys the frenulum. The loss of the protective foreskin desensitizes the glans. Because the membrane covering the permanently externalized glans is now subjected to constant abrasion and irritation, it keratinizes, becoming dry and tough. The nerve endings in the glans, which in the intact penis are just beneath the surface of the mucous membrane, are now buried by successive layers of keratinization. The denuded glans takes on a dull, grayish, sclerotic appearance.

* **Circumcision disables:** The amputation of so much penile skin permanently immobilizes whatever skin remains, preventing it from gliding freely over the shaft and glans. This loss of mobility destroys the mechanism by which the glans is normally stimulated. When the circumcised penis becomes erect, the immobilized remaining skin is stretched, sometimes so tightly that not enough skin is left to cover the erect shaft. Hair-bearing skin from the groin and scrotum is often pulled onto the shaft, where hair is not normally found. The surgically externalized mucous membrane of the glans has no sebaceous glands. Without the protection and emollients of the foreskin, it dries out, making it susceptible to cracking and bleeding.

* **Circumcision disfigures:** Circumcision alters the appearance of the penis drastically. It permanently externalizes the glans, normally an internal organ. Circumcision leaves a large circumferential surgical scar on the penile shaft. Because circumcision usually necessitates tearing the foreskin from the glans, pieces of the glans may be torn off, too, leaving it pitted and scarred. Shreds of foreskin may adhere to the raw glans, forming tags and bridges of dangling, displaced skin.[32]

Depending on the amount of skin cut off and how the scar forms, the circumcised penis may be permanently twisted, or curve or bow during erection. [33] The contraction of the scar tissue may pull the shaft into the abdomen, in effect shortening the penis or burying it completely.[34]

* **Circumcision disrupts circulation:** Circumcision interrupts the normal circulation of blood throughout the penile skin system and glans. The blood flowing into major penile arteries is obstructed by the line of scar tissue at the point of incision, creating backflow instead of feeding the branches and capillary networks beyond the scar. Deprived of blood, the meatus may contract and scarify, obstructing the flow of urine.[35] This condition, known as meatal stenosis, often requires corrective surgery. Meatal stenosis is found almost exclusively among boys who have been circumcised.

Circumcision also severs the lymph vessels, interrupting the circulation of lymph and sometimes causing lymphedema, a painful, disfiguring condition in which the remaining skin of the penis swells with trapped lymph fluid.

* **Circumcision harms the developing brain:** Recent studies published in leading medical journals have reported that circumcision has long lasting detrimental effects on the

developing brain,[36]adversely altering the brain's perception centers. Circumcised boys have a lower pain threshold than girls or intact boys.[37]Developmental neuro psychologist Dr. James Prescott suggests that circumcision can cause deeper and more disturbing levels of neurological damage, as well. [38, 39]

* **Circumcision is unhygienic and unhealthy:** One of the most common myths about circumcision is that it makes the penis cleaner and easier to take care of. This is not true. Eyes without eyelids would not be cleaner; neither would a penis without its foreskin. The artificially externalized glans and meatus of the circumcised penis are constantly exposed to abrasion and dirt, making the circumcised penis, in fact, more unclean. The loss of the protective foreskin leaves the urinary tract vulnerable to invasion by bacterial and viral pathogens.

The circumcision wound is larger than most people imagine. It is not just the circular point of union between the outer and inner layers of the remaining skin. Before a baby is circumcised, his foreskin must be torn from his glans, literally skinning it alive. This creates a large open area of raw, bleeding flesh, covered at best with a layer of undeveloped proto mucosa. Germs can easily enter the damaged tissue and bloodstream through the raw glans and, even more easily, through the incision itself.

Even after the wound has healed, the externalized glans and meatus are still forced into constant unnatural contact with urine, feces, chemically treated diapers, and other contaminants.

Female partners of circumcised men do not report a lower rate of cervical cancer,[40] nor does circumcision prevent penile cancer.[41] A recent study shows that the penile cancer rate is higher in the US than in Denmark, where circumcision, except among Middle Eastern immigrant workers, is almost unheard of.[42] Indeed, researchers should investigate the possibility that circumcision has actually increased the rate of these diseases.

Circumcision does not prevent acquisition or transmission of sexually transmitted diseases (STDs). In fact, the US has both the highest percentage of sexually active circumcised males in the Western world and the highest rates of sexually transmitted diseases, including AIDS. Rigorously controlled prospective studies show that circumcised American men are at a greater risk for bacterial and viral STDs, especially gonorrhea,[43] non gonococcal urethritis,[44] human papilloma virus,[45] herpes simplex virus type 2,[46] and chlamydia.[47]

* **Circumcision is always risky:** Circumcision always carries the risk of serious, even tragic, consequences. Its surgical complication rate is one in 500.[48] These complications include uncontrollable bleeding and fatal infections.[49] There are many published case reports of gangrene following circumcision.[50]Pathogenic bacteria such as staphylococcus, proteus, pseudomonas, other coli forms, and even tuberculosis can cause infections leading to death.[51, 52] These organisms enter the wound because it provides easy entry, not because the child is predisposed to infection.

Medical journals have published numerous accounts of babies who have had part or all of their glans cut off while they were being circumcised.[53 54 55] Other fully conscious, unanesthetized babies have had their entire penis burned off with an electrocautery gun.[56,57,58] The September 1989 *Journal of Urology* published an account of four such cases.[59] The article described the sex-change operation as "feminizing genitoplasty," performed on these babies in an attempt to change them into girls. The March 1997 *Archives of Pediatrics and Adolescent Medicine* described one young person's horror on learning that "she" had been born a normal male, but that a circumciser had burned his penis off when he was a baby.[60] Many other similar cases have been documented[61,62] Infant circumcision has a reported deathrate of one in 500,000.[63,64]

* **Circumcision harms mothers:** Scientific studies have consistently shown that circumcision disrupts a child's behavioral development. Studies performed at the University of Colorado School of Medicine showed that circumcision is followed by prolonged, unrestful non-REM (rapid eye movement) sleep.[65] In response to the lengthy bombardment of their neural pathways with unbearable pain, the circumcised babies

withdrew into a kind of semi coma that lasted days or even weeks.

Numerous other studies have proven that circumcision disrupts the mother-infant bond during the crucial period after birth. Research has also shown that circumcision disrupts feeding patterns. In a study at the Washington University School of Medicine, most babies would not nurse right after they were circumcised, and those who did would not look into their mothers' eyes.[66]

*** Circumcision violates patients' and human rights:** No one has the right to cut off any part of someone else's genitals without that person's competent, fully informed consent. Since it is the infant who must bear the consequences, circumcision violates his legal rights both to refuse treatment and to seek alternative treatment. In 1995, the American Academy of Pediatrics Committee on Bioethics stated that only a competent patient can give patient consent or informed consent.[67] An infant is obviously too young to consent to anything. He must be protected from anyone who would take advantage of his defenselessness. The concept of informed parental permission allows for medical interventions in situations of clear and immediate medical necessity only, such as disease, trauma, or deformity. The human penis in its normal, uncircumcised state satisfies none of these requirements.

Physicians have a duty to refuse to perform circumcision. They also must educate parents who, out of ignorance or misguidance, request this surgery for their sons. The healthcare professional's obligation is to protect the interests of the child. It is unethical in the extreme to force upon a child an amputation he almost certainly would never have chosen for himself.

Common Sense

To be intact, as nature intended, is best. The vast majority of males who are given the choice value their wholeness and keep their foreskins, for the same reason they keep their other organs of perception. Parents in Europe and non-Muslim Asia never have forced their boys to be circumcised. It would no more occur to them to cut off part of their boys' penises than it would to cut off part of their ears. Respecting a child's right to keep his genitals intact is normal and natural. It is conservative in the best sense of the word.

A circumcised father who has mixed feelings about his intact newborn son may require gentle, compassionate psychological counseling to help him come to terms with his loss and to overcome his anxieties about normal male genitalia. In such cases, the mother should steadfastly protect her child, inviting her husband to share this protective role and helping him diffuse his negative feelings. Most parents want what is best for their baby. Wise parents listen to their hearts and trust their instinct to protect their baby from harm. The experience of the ages has shown that babies thrive best in a trusting atmosphere of love, gentleness, respect, acceptance, nurturing, and intimacy. Cutting off a baby's foreskin shatters this trust.

Circumcision wounds and harms the baby and the person the baby will become. Parents who respect their son's wholeness are bequeathing to him his birthright--his body, perfect and beautiful in its entirety.

Paul M. Fleiss, MD, MPH, is assistant clinical professor of pediatrics at the University of Southern California Medical Center. He is the author of numerous scientific articles published in leading national and international medical journals.

JONES v. TOBEN Australia CASE SUMMARY

Prepared by Richard Warman 19 September 2002

FEDERAL COURT OF AUSTRALIA JONES v. TOBEN [2002] FCA 1150

www.austlii.edu.au/au/cases/cth/federal_ct/2002/1150.html

Decision rendered: (17 Sept. 2002)

Decision Summary: The Court found that the respondent Fredrick Toben, the Director of the "Adelaide Institute", had engaged in conduct that violated Part IIA of the Racial Discrimination Act 1975 (Cth) by publishing on his website at adelaideinstitute.org (and other mirror sites) and through printed newsletters Holocaust denial and other anti semitic material. The Court ordered that Töben remove the material from his web sites, and that he be restrained from continuing to distribute the same or similar material via web sites or otherwise, and that he be required to pay the applicant's costs.

On 5 October 2000, the Human Rights & Equal Opportunity Commission (HREOC) found that Fredrick Toben had engaged in unlawful conduct violating the Racial Discrimination Act 1975 (Cth) by publishing material that vilified Jews on the Adelaide Institute website. The Commission ordered Mr. Toben to remove the material from the web site, and to forward a letter of apology to the complainants in the terms set out in the Commission's decision.

On 30 March 2001, Jeremy Jones began proceedings in the Federal Court of Australia to enforce the decision of the Commission. Under the provisions of the Act at that time, the hearing before the Court was considered a hearing de novo although the Court could accept as evidence the decision of the Commission, as well as a copy of the record and documentary evidence that was before the Commission.

Racial Discrimination Act Part IIA of the Act is headed "Prohibition of Offensive Behaviour based on Racial Hatred", the relevant sections of which are ss. 18(B, C, and D).

Reason for doing an act s. 18(B) If:

(a) an act is done for two or more reasons; and (b) one of the reasons is the race, colour or national or ethnic origin of a person (whether or not it is the dominant reason or a substantial reason for doing the act); then, for the purpose of this Part, the act is taken to be done because of the person's race, colour or national or ethnic origin.

Offensive behaviour because of race, colour or national or ethnic origin 18C (1) It is unlawful for a person to do an act, otherwise than in private, if: (a) the act is reasonably likely, in all the circumstances, to offend, insult, humiliate or intimidate another person or a group of people; and (b) the act is done because of the race, colour or national or ethnic origin of the other person or some or all of the people in the group. 18C(2) "For the purposes of subsection (1), an act is taken not to be done in private if it: (a) causes words, sounds, images or writings to be communicated to the public;...

Exemptions: 18(D) Section 18(C) does not render unlawful anything said or done reasonably and in good faith: (a) in the performance, exhibition or distribution of an artistic work; or (b) in the course of any statement, publication, discussion or debate made or held for any genuine academic, artistic or scientific purpose or any other genuine purpose in the public interest; or (c) in making or publishing: (i) a fair and accurate report of any event or matter of public interest; or (ii) a fair comment on any event or matter of public interest if the comment is an expression of a genuine belief held by the person making the comment.

The parties: Jeremy Jones is president of Executive Council of Australian Jewry. Fredrick Töben is the Director of the 'Adelaide Institute'.

HREOC proceedings: The Court engaged in only a minimal review of the HREOC proceedings and this is summarized above.

Proceedings in the Court: The application by Mr. Jones was filed with the Court on 30 March 2001. At the early stages of the proceedings, Mr. Toben represented himself indicating that he had been unsuccessful in seeking to retain legal counsel. On 10

July 2001, Justice Branson declined to accept what Mr. Toben described as his "response and counterclaim" accompanied by an affidavit. After perusing the documents,

Justice Branson described them as; a) failing to meet the requirements of the Federal Court Rules, b) being argumentative in that they sought relief against the applicant's "Stalinist-like court actions" and "blatant totalitarian behaviour", c) largely irrelevant to any question before the Court, and, d) making serious ad hominem attacks against the applicant and others including another Justice of the Federal Court.

After Justice Branson refused to accept his documents, Mr. Toben requested that the proceedings be moved, that the application be dismissed because the applicant was a "known Zionist" and "racist" and that Justice Branson recuse herself on the basis of bias.

Justice Branson indicated to Mr. Toben that such requests should be brought in the form of motions to the Court and should be devoid of any material that "is simply scandalous in nature". Justice Branson set down further dates for the filing and hearing of these motions if brought by Mr. Toben. Mr. Toben filed a medical note with the Court indicating he would be unable to attend the scheduled Court hearing. The Court date was rescheduled for 15 August 2001 as a result.

Correspondence submitted by Mr. Toben seemed to indicate that he felt that he had filed a motion based on documents submitted to the Federal Court Registry. These documents sought a declaration that Mr. Toben was not in breach of the Racial Discrimination Act, that the hearing be moved to his location, that Justice Branson be removed for bias, and that the applicant be ordered to pay his costs. The document was supported by what Mr. Toben purported to be an affidavit arguing that Mr. Jones and the Executive Council of Australian Jewry were out to persecute him and that he was unable to secure legal counsel because they, "fear being pressured by the Applicant's Zionist racist organisation...". The document went on to question the policy basis of the Racial Discrimination Act, compared those involved in the administration of the Act to Nazi defendants at Nuremburg who claimed to be 'just following orders', and included "comments defamatory of a number of individuals, including another judge of the Court".

Mr. Toben was advised that the materials did not meet the requirements of the Federal Court Rules, but that Mr. Toben could peruse copies of the Rules through the Federal Court Registry.

Subsequently, Mr. Toben filed a request on 28 August 2001 that the proceedings be adjourned for "at least six months" on the basis that; a) he had been ill and unable to work on the matter, b) his inability to secure legal counsel because such counsel, "fear the Australian Jewish Zionist's power", and thus the proceeding should be stayed, and d) that his father was dying and required his assistance.

At a hearing on 18 October 2001, Justice Branson declined to stay the proceedings or adjourn them for 6 months. The applicant was directed to file and serve a statement of claim by 1 November 2001, and that the respondent file his defence by 15 February 2002 in light of his need to assist his siblings in attending to his father. Mr. Toben did not bring a motion for Justice Branson to disqualify herself, but nonetheless Justice Branson indicated that she, "did not consider that [she] was unable to bring a fair mind to the hearing and determination of the proceeding, nor did [she] think that an informed, reasonable person might think that [she] would be unable to do so."

On 25 February 2002, Mr. Toben filed with the registry a document that was again argumentative, "was in no way responsive to the statement of claim", and did not meet the

requirements of the Federal Court Rules. Mr. Toben also filed a separate document entitled as a notice of motion for dismissal of the application.

At the hearing on 14 March 2002, Justice Branson indicated that she would stand down the case until a defence had been filed or either party filed motions seeking interlocutory relief.

On 20 March 2002, applicant file motion for summary judgement, on 2 April 2002, respondent filed motion for summary dismissal including on the grounds that the RDA is unconstitutional.

At a hearing on 4 April 2002, Mr. Toben again asked that the proceedings be adjourned indefinitely based on his unsupported assertion that he was unable to secure legal counsel. Justice Branson rejected this request, and directed Mr. Toben to issue notices of constitutional question as required under the Judiciary Act. Mr. Toben's appeals of these decisions were rejected by the **Full Court on 21 May 2002.**

On 4 June 2002, Mr. Toben requested that he be permitted to be represented by a lay person who admitted to having no experience with the Federal Court. The respondent objected to this request. Justice Branson offered Mr. Toben a 10-day extension in which to file a defence during which time his request to be represented by this individual would be considered. Mr. Toben apparently expressed his opposition to this course of action, and again pressed his request that he be permitted to be represented by the lay person. When Justice Branson explained that she would consider the matter more fully if it could be shown that the lay person could contribute in some useful way, Mr. Toben in a dubious means of retaliation indicated that he would not speak anymore during the proceeding.

On 18 June 2002, and 2 July 2002, the Court heard the applicant's motion for the striking out of Mr. Toben's submissions to the extent that they purported to be legitimate pleadings, and for summary judgement and corresponding orders based on Mr. Toben's failure to follow the Court's direction that he file a defence by 15 February 2002.

In her decision, Justice Branson reviewed the relevant Federal Court Rules and case law and came to the conclusion that, "it was apparent by 14 March 2002 at the latest that the respondent was unwilling to co-operate with the Court and the applicant in bringing this proceeding to trial within an acceptable period of time or at all." [para 56] Justice Branson rejected Mr. Toben's repeated assertions that he was unable to obtain legal counsel in the absence of any supporting evidence and that it was likely that his efforts had been restricted to attempting to obtain pro bono legal assistance without making any argument that he was unable to pay for such help.

Further, Justice Branson indicated that given Mr. Toben's extensive post secondary education, he would have been able to file a defence on his own with the assistance of registry staff had this been his intent.

Justice Branson went on to cite the Canadian Human Rights Tribunal decision in Citron v. Zundel with regard to the nature of the internet, and the evidence supporting the fact that Mr. Toben was in fact in control of the web sites and the Adelaide Institute.

NB - At paragraph 73, Justice Branson found that, In my view, the placing of material, whether text, graphics, audio or video, on a website which is not password protected is an act which causes words, sounds, images or writing to be communicated to the public in the sense that they are communicated to any person who utilises a browser to gain access to that website.

Clearly this part of the decision will raise concerns regarding the ability of racist groups within the Australian context to create web sites that are password protected, and therefore may be argued to be outside the prohibitions against racial hatemongering found in the RDA.

After reviewing the content of the web site complained of by Mr. Jones, Justice Branson adopted the reasoning found in the recent Australian case of Jones v. Scully with regard to whether the material in question violated community standards. Justice Branson found at paragraph 88 that the material published by Mr. Toben on his web site conveyed the following imputations that were reasonably likely to offend and insult Australian Jews:

(a) there is serious doubt that the Holocaust occurred;
(b) it is unlikely that there were homicidal gas chambers in Auschwitz;

(c) Jewish people who are offended by and challenge Holocaust denial are of limited intelligence; and (d) some Jewish people, for improper purposes, including financial gain, have exaggerated the number of Jews killed during World War II and the circumstances in which they were killed.

After finding that Mr. Toben could not avail himself of any of the defences offered under the Act, Justice Branson stated that, "I am satisfied that the respondent has committed an act that is unlawful under the RDA and I find that the complaint made to HREOC on 31 May 1996 by the applicant has been substantiated." [para 102]

Relief: The applicant had sought an order that the respondent had engaged in unlawful conduct contrary to the Racial Discrimination Act by publishing on his web site the material in question, an order restraining the respondent from continuing such activity, an apology, and an order for costs.

Orders: The Court felt that as in the Jones v. Scully decision, ordering an apology would be futile under the circumstances.

With regard to the potential ability of others to attempt to subvert any court orders to remove content from the respondent's web site, Justice Branson adopted the reasoning of the Cdn. Human Rights Tribunal in Zundel where they indicated that further complaints could be filed, and that the decision would have symbolic, educational and preventive value as well. The Court ordered that Mr. Toben remove within seven days certain specific anti-semitic material as well as any other material that conveys that:

(a) there is serious doubt that the Holocaust occurred;
(b) it is unlikely that there were homicidal gas chambers at Auschwitz;

(c) Jewish people who are offended by and challenge Holocaust denial are of limited intelligence; and,

(d) some Jewish people, for improper purposes, including financial gain, have exaggerated the number of Jews killed during World War II and the circumstances in which they were killed.

Justice Branson further issued a restraining order that Mr. Toben not publish, or republish to the public either by himself or through any agent or employee any material outlined above either on the Internet or otherwise [presumably this will encompass Mr. Toben's printed newsletters as well]. Zyklon-B insecticide, used to kill lice in the Auschwitz delousing chamber, (above) caused distinct blue staining on all the walls. This is the same poison Zionists claim was used to exterminate millions of jews in the notorious gas chambers. In 1990, Dr. Piper, top Auschwitz museum official (right) with The Institute of Forensic Research in Krakow, scientifically tested the walls of the gas chamber (below) and discovered no staining and near zero residue of anything toxic. This data is being withheld from the public.

Truth Does Not Fear Investigation
